

Assignmet-7: Convert All For loop problems to While loop solutions

Nallagoni Omkar • Jun 14

100 points

1)WAP ask the user print the square of the numbers from 1 to 5

2)WAP ask the user take 5 random numbers between 10 to 100
and print the square of the random numbers

3)Create a function on reuse code lines
call that function inside the for loop

4)wap ask the user print the even or odd values between 11 to 21

5)wap ask the user enter a value from keyboard 5 times
print that value is even or odd

#6)Wap to create 9th table

#7Q) WAP to print the divisors of number 50

#Q8) WAP print the sum of first 10 natural numbers

#9Q) How many divisors are available for 50

10Q)
Ask the user enter one number from keyboard
ask the user get the second number randomly from 1 to 10
if num1 == num2 then print you won
otherwise print you lost
Iterate these lines 3 times

Case-2: give 5 chances
whenever fail print the number of chances left

case-3: Suppose your all chances are over
print your account locked try after 24hours
